Pre-Meeting Questionnaire

4/23/2020

Hi,

Thank you for taking the time to help me complete my Capstone in my final 2 weeks of class at Mercer University! There is a standard consent attached to volunteer for this project. I have designed a mobile voting application prototype. This idea came about as a supplemental voting alternative to voting in person at the polls or mailing a ballot in. The idea was pushed to the forefront now that voting in person has become problematic considering the current pandemic.

Review Consent - (No need to sign. We will review it and record a verbal confirmation in usability zoom meeting). Permission to record to zoom meeting will be requested as well.

-After we have determined a date/time for the usability zoom meeting the study will begin.

Usability Procedure - In the zoom meeting I will share my screen and bring up the app prototype. I will read a task for you to complete, but you must direct my navigation as to where to click in order to complete the task. I cannot speak or offer direction other than simply reading tasks. You must state "Task complete" when you are finished with the current task and find your way back to the home screen through the application without guidance before the next task is read.

Prototype Description - (Areas where you may typically enter information like email, username, password, etc.) are implied and not operational in the prototype. They will be operational in the live application design.

Testing Demographic – Men and Women 18 – 70 years of age

Pre-User Interview

Do you think a mobile voting application would be a beneficial asset in the democratic voting process?

Do you see yourself using "Your Voice" as an alternative to mail-in voting or physically going to the polls?

Do you use mobile applications regularly?

What app features do you expect to see in the application?

Proceed with User Task/Analysis
