Project Scope

Jeffrey Brock Yeates

College of Professional Advancement, Mercer University

INFM480: Capstone for Information Technology and Informatics

Dr. Feng Liu

October 23, 2024

The ultimate deliverable of this research study is a proposal. This proposal would be presented to the company which is being researched and should outline the research process, the current system's inefficiencies, and a new system prototype. I believe, at minimum, the proposal should include x sections: a summary of the research study, a report on research insights, a prototype of a new system, and results of pilot testing. There may be more components of a quality proposal which will be identified as the process is executed.
