

Which of the 3 developers calls you more attention? Did you see yourself in one of these professions? Explain

What programming languages did you know? If you are not related to any of those, which one would you like to learn? Explain

Learning HTML, CSS, and PHP provides a strong foundation for building dynamic and visually appealing web applications. Additionally, PHP's server-side capabilities enable you to create interactive and data-driven websites. Keep exploring and practicing with these languages to further enhance your web development skills. SQL/PHP is the ones I want learn more about after school. I've built a love behind these three and plan to make my future around them but if I need to go with whets in style I'm willing to do that and still keep these 3 in my life as a another flow of money.
