

TEVO KICKS

Objectives

- Create a website/application that supports all user's needs.
- Make a warm, welcoming design that makes users want to come back.

What will the application and website do??

- Show users upcoming shoe release dates and link websites from which they can get the forthcoming shoes.
- Add many different shoe brands that users can search through.
- Send 2-day reminders to users' emails whenever a shoe they added to their favorites list comes out in the next two days.
- Send alerts to users when big websites and apps like the Sneakers app raffles are about to start.
- List prices for every upcoming shoe so users know how much the shoe will cost them.

Requirements for this project

- A reliable source with upcoming shoe releases and pictures of shoes
- A website that will have almost every shoe release that I can send my users to when it is time to enter raffles or when they want to buy the shoe.
- A reliable source with the number of pairs of whatever shoe is released.
- I have a good outlook on what brand will be the most watched, and I need to focus on it the most.
- Have backstories behind every pair of shoes featured on the site.
